About Me

Android SDK & Flutter Developer with **3+ years** of experience building scalable mobile applications and SDKs. Currently at **PayOrc**, I develop a production-grade Android **Payment SDK** using Kotlin and Jetpack Compose, focusing on SDK architecture, embedded payment solutions, Flutter plugin development, **localization**, merchant customization, REST API integration, technical documentation, and **Maven** Central publishing. Previously at **Tectoro**, I built Android and Flutter applications for **fintech** and rural enablement projects using Clean Architecture. Passionate about building secure, high-performance developer tools and sharing knowledge through **15+ technical** articles published on Medium.

WORK EXPERIENCE

Software Development Engineer, *Payorc* 04/2026 – Present

- Developed and maintained a production-ready **Flutter Payment SDK**, along with a native **Android Payment SDK** using **Kotlin, Jetpack Compose, Coroutines, and MVVM**.
- Implemented multiple payment methods including **Card Payments, Google Pay, Apple Pay, Tabby, 3D Secure, and UPI**, with robust payment status, callback, error handling, and verification flows.
- Built **embedded payment experiences** with dynamic UI, merchant-driven customization, localization, and configurable checkout components across Flutter and native platforms.
- Developed **native iOS Payment SDK functionality using Swift and SwiftUI**, and integrated native Android/iOS capabilities with Flutter through **platform channels**.
- Worked on **SDK distribution through Maven, GitHub Packages, and Swift Package Manager (SPM)**, along with API authentication, HMAC debugging, WebView/3DS troubleshooting, and collaboration with backend teams across Sandbox and Production environments.

Software Developer, *Tectoro* 02/2025 – 12/2025

- Developed CSP app for **IndusInd Bank** enabling rural merchants to perform **AEPS**-based Aadhaar account opening, transactions, withdrawals, deposits, and online shopping.
- Integrated and managed **REST APIs using Dart** for seamless, secure communication between the mobile app and backend services.
- Secured API communication using **AES-GCM** encryption, **HMAC** signatures, and **GUID**-based request validation to reduce tampering and data leakage.
- Implemented **biometric** authentication, OTP flows, root detection, screenshot-disable, and device-change request workflows to harden app security.
- Integrated **BLE printer** support for Bluetooth device discovery and transaction receipt printing.
- Built merchant onboarding and in-app certification system, improving activation and reducing support queries by 30%.
- Followed **MVVM architecture** and used **Cubit (Flutter Bloc)** for clean, scalable, and testable state management.

Flutter Developer, *HelpRush* 07/2024 – 01/2025

- Led development of Helprush Pro (multi-vendor marketplace): OTP-verified jobs, Razorpay payments, location-based navigation, and gamification to boost engagement.
- Integrated DigiLocker authentication and a professional video upload, which were used to verify the provider's credentials before they could list their services on the platform
- Implemented Clean Architecture + BLOC patterns for maintainable, testable code.
- Used tools like Git, Jira, Trello for version control and track the task.

Flutter Developer, *Horecah* 01/2024 – 05/2024

- Built hiring platform with ML Kit OCR for document extraction (Aadhaar, passport).
- Enabled users to build resumes and downloadable, shareable visiting cards within the app, from flutter widgets to the pdf and image.
- Utilized cookie management and dio cookie jar techniques to handle refresh and access tokens effectively, enhancing security and user experience.
- Implemented the language localization using the the intl package, which offers utilities for internationalizing Flutter applications.

Flutter Developer, *HelpRush* 06/2022 – 01/2024

- Developed a sophisticated user authentication system with multi-factor verification.
- Engineered a comprehensive rating and review mechanism for service providers.
- Developed real-time communication channels between users and service providers
- Designed progress-tracking features to motivate users and improve retention.
- Deployed push notifications and reminders to keep users engaged and informed about their achievements.
- Led cross-functional team collaboration between design, backend, and mobile teams,
- Conducted regular code reviews and mentoring sessions for junior developers

EDUCATION

B.E Specialization in Computer Science, *SSM College of Engineering* 10/2018 – 06/2023

SKILLS

Languages & Frameworks
Kotlin, Flutter, Dart, Swift, Swift UI, RESTful APIs, JSON, Python

Security & Networking
AES-GCM encryption, HMAC, secure API practices, Socket.IO, WebSockets.

Performance & Optimization
Method Channels, Debugging, App Size Reduction, Performance Optimization, Testing.

AI-assisted Development
CodeX, Antigravity, ChatGPT, Claude.ai, Cursor

State & Architecture
Provider, BLOC, Cubit, MVVM, MVC, Clean Architecture

Storage & Backend
Firebase, Hive, Shared Preferences, Secure Storage

Tools & Workflow
Git/GitHub, Jira, Trello, Figma, Android Studio, Xcode, Postman, Agile Methodology, Scrum.

Developer Community Contribution
Authored 15+ technical articles on Medium covering diverse SDE topics, sharing insights, best practices, and tutorials to help other developers.
